Abstract

India's contribution to research in agriculture and related fields is assessed from an analysis of publications indexed in *CAB Abstracts*. *CAB Abstracts* indexed 51,761 papers, including about 48,300 journal articles, from more than 3,330 addresses in over 800 locations, spread over 30 states/ union territories of India, in the five years 1990-1994. *CAB Abstracts* has classified these papers into 22 major research areas and about 250 subfields. Plants of economic importance is the leading area of research in India, followed by Animal science. The largest number of papers published are in the three subfields, viz. Pests, pathogens and biogenic diseases of plants (8,898 papers), Plant breeding and genetics (5,675 papers) and Plant production (5,231 papers). A little over 63% of these papers were published by academic institutions. Punjab Agricultural University, Ludhiana, and the Haryana Agricultural University, Hissar, have contributed more than 2370 papers each, not including papers published from other centres of these universities. Agricultural universities have published 16,555 papers and general universities 9,933. The Indian Council of Agricultural Research has accounted for 7,856 papers. Indian researchers have used more than 1950 journals from over 65 countries. About 77% of all journal articles were published in 483 Indian journals. In no other field did Indian researchers publish such a large percent of papers in Indian journals. Unlike in physics and materials science, Indian agricultural scientists have used letters journals only infrequently. Delhi, Ludhiana, Hissar and Bangalore are the leading centres of agricultural research, while Uttar Pradesh, Maharashtra, Tamil Nadu, Haryana and Karnataka are the states accounting for the largest number of papers.

Introduction

India is essentially an agricultural country with over three-fourths of the population living in rural areas and dependent on agriculture-related occupations. Pre-Independent India was badly hurt by frequent famines and drought. The eminent economist Amartya Sen owes his major works on hunger to the devastations of the great Bengal famine which had made deep impressions on him when he was still a child. If India today is self sufficient in food, it is in no small measure due to indigenous agricultural research. Of course, India still has a long way to go. The population is increasing; the land area under cultivation is decreasing; and excessive use of chemical fertilisers, pesticides and insecticides are adversely affecting the environment. Far more needs to be produced than now, and produced in a much safer way. These are enough challenges to keep our agricultural research establishment busy.

This paper attempts to map agricultural research in India and tries to answer questions such as which institutions are carrying out the research, in which journals does Indian research get published, in what subfields India is strong, and so on. It aims not only to inventory agricultural research in India but also to provide an appreciation of endogenous research capacity in this crucial field.

This paper is a part of a larger study of mapping science in India in which I am looking at India's contribution to the literature of the world in different fields, based on an analysis of major international databases. In an earlier part of this study I looked at medical research carried out in India and its relevance to the country's healthcare concerns. Based on data collected from seven years of *Medline*, the analysis revealed that there is scope for rethinking on India's research priorities.¹ This study has received considerable attention both within India and abroad.²⁻¹¹ In other studies I and my colleagues have looked at India's contribution to the literatures of mathematics and related areas (based on *Mathsci*),¹² physics (based on *INSPEC-Physics*),¹³ and materials science (based on *Materials Science Citation Index*).¹⁴ I have also made an analysis of medical research in India based on *Science Citation Index* 1981-1985.¹⁵

Methodology

For this macroscopic study on agricultural research in India, I identified all papers from India indexed in the CD-ROM edition of *CAB Abstracts* 1992, which uses SPIRS, the proprietary software of SilverPlatter. Merely giving 'India' as the search term in the address field was not enough as *CAB Abstracts*, unlike *Science Citation Index* or *INSPEC-Physics*, does not invariably give country names. I developed a search strategy in which I gave the names of all Indian cities and towns where there is an institution that could have carried out agricultural or related research. Names of such cities and towns were collected from many sources, such as the *Universities Handbook*,¹⁶ DST's *Directory of R&D Institutions*¹⁷ and INSDOC's *Directory of Scientific Institutions*,¹⁸ and our earlier studies on mapping Indian science.^{1,12-15} Some publications from countries like USA, Japan and Italy also showed up in the data thus downloaded, as names of some cities/towns in my list are found in these countries as well. For example, Salem is in Tamil Nadu, India, and Winston-Salem is in the USA; and Kochi is both in Kerala and in Japan. I carefully removed non-Indian entries. The data needed considerable amount of cleaning up. Names of many institutions had several variants. For example, Bidhan Chandra Krishi Vishwavidyalaya is also referred to as B C Agriculture University and BCKV. In some entries Vishwavidyalaya is spelt as two words: Vishwa Vidyalaya. These were standardised. There were also some errors, such as Dhaka, Karachi and Bangladesh being given as belonging to India. Such entries were removed.

The elements downloaded are: AD: Address; SO: Source (journal title, volume, pages); PY: Publication year; PT: Publication type; and CC: Classification codes. To the data downloaded from *CAB Abstracts* I added country of publication of the journals as seen from *CAB International Serials Checklist* (1995 edition), *Serial Sources for the BIOSIS Previews Database* (1993 edition), *SCI Guide* (1994) and *Ulrich Plus* (1997). The data were converted into a database file and analysed using Foxpro. Unlike in the earlier studies in this series, I did not bother to add impact factor values from *Journal Citation Reports*, for two reasons: (1) Agricultural research is mostly published in low-impact journals. Unlike journals in new biology, agricultural journals are usually of very low impact. (2) Agriculture is not well covered in *Science Citation Index*. Most journals

in which Indian agricultural scientists publish are not indexed in *Science Citation Index*. and therefore they will not be listed in *Journal Citation Reports*.

Analysis

There were 51,761 publications from India in *CAB Abstracts* in the five years 1990-1994. As seen from Table 1, the largest number of papers were published in the four years 1988-1992. About 30% of the papers had a publication date of 1989 or earlier. I am not sure if this delay in coverage by *CAB Abstracts* is largely confined to Indian and other developing country publications or if even mainstream country publications suffer the same extent of delay. Surely, CABI should take some steps to bring down the delay in covering the literature. Other international S&T databases such as *Science Citation Index*, *Chemical Abstracts* and *INSPEC-Physics* cover whatever they cover much quicker. Besides, physicists get to know the latest developments through the Los Alamos archive, which systematically makes available preprints of papers long before they appear in print.

Indian researchers had published about 48,300 articles in about 1,950 journals, as seen from *CAB Abstracts* 1990-1994. In Table 2 I list these journals along with the country of publication of the journals and the number of Indian papers in each one of the journals. For 24 journals, I am unable to assign the countries of publication at the time of writing. It is possible that some of these may not be journals at all. Also, I am not certain that all the non-journal items are classified correctly. There were also 600 book chapters/books and over 1,600 conference papers. Indian agricultural scientists had published 1,560 articles in 61 letters journals/ newsletters (Table 3). Letters journals and books/book chapters (often equivalent to review articles) and even conferences (those which are indexed by CABI) are used by Indian agricultural scientists only to a limited extent. Probably they should examine their publication strategy and make appropriate choices to increase their visibility.

Unlike in most other fields, in agriculture Indian researchers use Indian journals to a very large extent -- close to 77% of all journal articles were published in Indian journals. They have published their work in journals from more than 65 countries, mainly India, UK, USA and the Netherlands (Table 4). Corresponding figures for different fields are:

Physics (as seen from <i>INSPEC-Physics</i> 1992)	- 18.3% [Ref. 13]
Medicine (as seen from <i>Medline</i> 1988- 1994)	- 33.5% [Ref. 1]
Mathematics (as seen from <i>Mathsci</i> 1988-1995)	- 35.2% [Ref. 12]
Materials science (<i>Materials Science Citation Index</i> 1991-1994)	- 9.5% [Ref.14]
Biology (as seen from <i>BIOSIS</i> 1992)	- 52.3% [Unpublished]
Agriculture (<i>CAB Abstracts</i> 1990-1994)	- 74.6%

This is to be expected. In developing countries, there is some misconception about publishing in home-country journals. Often, articles in foreign journals are given much higher weightage than articles in national journals, not realising that not all foreign journals are uniformly good. Besides, as neurosurgeon Sunil Pandya of KEM Hospital, Mumbai, points out, even the mediocre journals published in the home country may occasionally publish some high quality papers [private communication]. Communication habits vary from field to field.¹⁹ In physics and materials science which are far more 'universal', scientists prefer to publish in international journals, which are often prohibitively costly, to maximise their chances of reaching out to a worldwide audience. But in agriculture, which is far more rooted in the soil and locale specific, it is only to be expected that a large part of the work will be published in national journals which will be easily accessible to other researchers in the country (or region), extension workers and the end users. Indian journals indexed in *CAB Abstracts* 1990-1994 are listed in Table 5. Forty-eight of the more than 480 Indian journals used have published at least 200 Indian papers in the five years, and 107 journals have published 100 or more Indian papers.

Use of foreign and national journals has remained a point of debate for a long time in India. While most Indian journals suffer from poor circulation and poor editing, indifferent peer review and low production values, there have been some efforts to bring out journals of quality. About 25 years ago, the Indian Academy of Sciences, Bangalore, consulted members of the Indian Physics Association and the Fellows of the Academy and took the decision to launch *Pramana*, the Academy's physics journal. I played an important role in this initiative and I also had the privilege of steering the journal in its early days as the journal's first executive editor. Subsequently, the Academy reorganised

its journals. More recently, Samiran Nundy and colleagues at the All India Institute of Medical Sciences launched the *National Medical Journal of India*. It must be remembered that publishing indigenous journals of quality is an essential component of any healthy scientific enterprise.

The Indian papers indexed in *CAB Abstracts* 1990-1994 are classified into subfields in Table 6. *CAB Abstracts* assigns more than one subclassification code to each paper, usually three or four. I have taken into account only the first of these. 'Pests, pathogens and plant diseases' is the subfield accounting for the largest number of papers from India. It is followed by 'Plant breeding and genetics' and 'Plant production'. In all, India has published in 250 subfields, with more than 500 papers in 16 subfields. At the other extreme, in 58 subfields Indian researchers have published less than 10 papers in the five years. These include History and biography (subfield BB500), eight papers; Aquaculture equipment (NN410), nine papers; Communication (UU360), four papers; and Documentation (CC310), two papers.

The number of papers contributed by different Indian institutions is given in Table 7. There are more than 3,300 addresses, including some residential addresses. Punjab Agricultural University, Ludhiana; Haryana Agricultural University, Hissar; and the Indian Agricultural Research Institute are the three most prolific publishing institutions. Tamil Nadu Agricultural University, Coimbatore, is the only other institution to have published more than 1,000 papers in the five years. Most agriculture universities have laboratories/field centres in more than one location. For example, Punjab Agricultural University has its headquarters at Ludhiana, but papers are also published from eight other centres. In this table, each centre is listed. Not surprisingly, the top nine in the list are 'agricultural' universities (including institutions devoted to dairy and veterinary sciences). Banaras Hindu University and Aligarh Muslim Universities are the only two general universities (not exclusively devoted to agriculture and related fields such as horticulture) in the top 25 institutions listed in Table 7. Delhi University, which has excellent departments of botany and zoology, is ranked 26th.

Academic institutions -- universities and colleges -- are the leading performers of agricultural research and they account for about 63% of all papers from India. ICAR laboratories are responsible for about 11.3% of Indian publications (Table 8). The

contributions made by different states and cities/towns are given in Tables 9 and 10 respectively. Uttar Pradesh leads the states with over 8,300 publications, followed by Maharashtra, Tamil Nadu, Haryana and Karnataka. Delhi, Ludhiana, Hissar and Bangalore are the leading publishing cities. In all, papers have been published from about 830 cities/towns. Unlike institutions engaged in research in physics and materials science, institutions carrying out agricultural research are located in smaller towns and in remote locations. This is inevitable, as much of agricultural research is field based.

Discussion

This is essentially a macroscopic study, looking at agricultural research in India as a whole. I have used *CAB Abstracts* as the source of information. There are two other international databases, viz. *AGRIS* and *AGRICOLA*, which could have also been used. I chose *CAB Abstracts* for the following reasons. *AGRIS* depends entirely on national input centres for gathering information, and I found that, for reasons I will not go into here, the job was not being done well. *AGRICOLA* does not cover Indian work as comprehensively as *CAB Abstracts*. This study based on *CAB Abstracts* 1990-1994 shows that a substantial number of papers are being published by Indian agricultural scientists, and that a very large proportion of these papers are in the area of pests, pathogens and plant diseases; plant breeding and genetics; and plant production. There were only 231 papers in the area of "biotechnology", showing that India is slow in catching up in the rather important area of agriculture-oriented biotechnology. In the past two decades many schools of new biology have emerged, e.g. at the Indian Institute of Science, Madurai Kamaraj University and M S University of Baroda. Conscious efforts to bring scientists in these schools and centres of agricultural research to work together may prove profitable.

Meeting the domestic food requirements has been the foremost social priority before India since Independence. Importance was given to food production all along, especially in the sixties and thereafter. A clear policy framework coupled with sound planning and implementation backed by generous research and development investments ensured sustained production of foodgrains and other agricultural commodities, says Dr Paroda, Director General of the Indian Council of Agricultural Research. Foodgrain production rose from 51 million tonnes in 1950-51 to 191.09 million tonnes in 1994-95.

Even thirty years ago, India had to supplement internal production of foodgrains with imports. Today the country is able to export a variety of agricultural products including foodgrains. Says Mr M R Srinivasan,²⁰ Member of India's Planning Commission, that three factors were responsible for this transformation: (1) the steadfast application of science at the field level by scientists of the ICAR, which now has 46 central research institutes (including four national institutes) and 26 national research centres, and the 29 agricultural universities set up with the assistance of the ICAR. (2) The Indian farmers, for their part, readily accepted new varieties, adopted new farm practices and worked hard. (3) Imaginative political and administrative leadership in the sixties played a vital catalytic role.

The goals were clear. The political will and administrative support were there. And the scientists rose to the challenge under an able and visionary leader. And above all, the Indian farmer was not found wanting. Similar situations were to repeat subsequently in some of the projects of the Defence and Space Departments, and a technologist who had played a significant role in the successes of both these departments was honoured with the country's highest award, viz. Bharat Ratna.

A comparison of agricultural and medical research in India will be instructive. Both agriculture and medicine are, in a sense, extensions of applied biology. Both have had a hoary past in India, albeit in their traditional forms. However, while agricultural research in Independent India has by and large delivered the goods, medical research, I am afraid, has not. My own scientometric studies have shown that in terms of both the volume of work carried out and the relevance to the healthcare needs of the country medical research in India could do a lot better.^{1,21} Significantly, medical researchers, educators and editors such as Valiathan,^{3,22} Pandya,²³ Kartha²⁴ and Nundy,²⁵ with the insight of insiders, hold similar views. The inevitable question is: why have not the medical research establishment and the doctors in India achieved the same level of success as the agricultural establishment and the farmers?

It is necessary to point out that agricultural research can not rest on its laurels and be complacent. Newer challenges have emerged and they have to be met with visionary leadership, planning, goal setting, dedicated work in the lab and the field, innovative methods of extension and so on. It is an unending journey.

Acknowledgement

This study was partially supported by the Department of Scientific and Industrial Research, New Delhi, under its NISSAT programme. I am grateful to the M S Swaminathan Research Foundation, Chennai, for providing me working space and other facilities and allowing me free access to their CD-ROM database collection. Mr K Suresh, Ms K Umarani, Mr G S Sridhar and Mr S Gilbert Samson assisted in data processing.

**** Journal Country Not Known

Journal countries were checked from four sources: 1. *CAB International Serials Checklist*, 1995 edition; 2. *Serial Sources for the BIOSIS Previews Database*, 1993 edition; *SCI Guide & List of Source Publications*, 1994; Ulrich CD-ROM version, 1997. Some titles were not listed in any of these sources. Also, in some cases we were not sure whether the document is a report, book, book chapter or journal article. CAB Abstracts has classified some items under the head 'Miscellaneous', and we have faithfully followed the same classification for these items. But, the error caused by this uncertainty is too small and has not affected our interpretation of the data.

**Table 3: Letters journals and newsletters used by Indian agricultural researchers
as seen from CAB Abstracts 1990 - 94**

CAB Abstracts provides more than one classification codes for most papers, as a given paper may be relevant to more than one subfield. We have taken into account only the first of these classification codes.

**Table 7: Indian institutions publishing papers as seen from CAB Abstracts 1990-94
(Arranged by number of Indian papers)**

Sl No.	Institution	City/town	Number of Indian Papers
1	Punjab Agricultural University	Ludhiana	2512
2	Haryana Agricultural University	Hissar	2377
3	Indian Agricultural Research Institute	New Delhi	1701
4	Tamil Nadu Agricultural University	Coimbatore	1252
5	Bidhan Chandra Krishi Vishwavidyalaya	Mohanpur	1023
6	National Dairy Research Institute	Karnal	897
7	University of Agricultural Sciences	Bangalore	840
8	Govind Ballabh Pant University of Agriculture and Technology	Pantnagar	823
9	Indian Veterinary Research Institute	Izatnagar	773
10	Banaras Hindu University	Varanasi	686
11	Forest Research Institute	Dehra Dun	662
12	International Crops Research Institute for the Semi-Arid Tropics	Patancheru	591
13	University of Agricultural Sciences and Technology	Dharwad	585
14	Himachal Pradesh Agricultural University	Palampur	572
15	Gujarat Agricultural University	Anand	547
16	Punjabrao Agricultural University	Akola	543
17	Dr Yashwant Singh Parmar University of Horticulture and Forestry	Solan	532
18	Marathwada Agricultural University	Parbhani	530
19	Indian Institute of Horticultural Research	Bangalore	528
20	Aligarh Muslim University	Aligarh	484

The names of institutions are not standardized in *CAB Abstracts*. For example, Bidhan Chandra Krishi Vishvavidyalaya is also referred to as BC Agricultural University, BCKV, and Bidhan Chandra University. It took considerable effort to merge all papers from the same institution named differently. Also most agricultural university have many centres. For example Panjab Agricultural University has its main centre at Ludhiana and other centre in eight other towns viz. Gurdaspur, Jalandhar, Bathinda, Faridkot, Abohar, Amritsar, Kapurthala, Kheri. However, these are not merged into a single entry.
